Chemical Properties

CAS	
Formula	C ₆ H ₉ NOS ₂
MW	175.26
Storage	
Structure	 <p>The chemical structure of Sulforaphene is shown as a skeletal structure. It consists of a sulfur atom double-bonded to an oxygen atom and single-bonded to a methyl group (CH₃). This sulfur atom is also single-bonded to a carbon atom that is part of a trans-alkene system. The other carbon of the double bond is single-bonded to a propyl chain, which ends in a nitrogen atom double-bonded to a carbon atom, which is in turn double-bonded to a sulfur atom.</p>
