Chemical Properties

CAS	
Formula	C ₁₂ H ₃₀ N ₂ O ₆ P ₂
MW	360.33
Storage	
Structure	 <p>The chemical structure shows a central butane chain. The first carbon of the butane chain is bonded to a phosphoramidic acid diethyl ester group. The second carbon is bonded to a hydrogen atom. The third carbon is bonded to a hydrogen atom. The fourth carbon is bonded to a diethoxy-phosphorylamino group. The diethoxy-phosphorylamino group consists of a phosphorus atom double-bonded to an oxygen atom and single-bonded to two ethoxy groups (-OCH₂CH₃). The phosphorus atom is also single-bonded to a nitrogen atom, which is in turn single-bonded to the fourth carbon of the butane chain.</p>
