Chemical Properties

CAS	
Formula	C ₂₉ H ₃₂ ClN ₃ O ₇
MW	570.04
Storage	
Structure	 <p>The image shows the chemical structure of Amlodipine besilate impurity B. It consists of a dihydropyridine ring system substituted with a chlorine atom, a methoxy group, and a propyl chain. The propyl chain is linked via an ester bond to a benzamide moiety, which is further substituted with a chlorine atom and a methyl group. The counterion is a chloride ion (Cl⁻).</p>
