Chemical Properties

CAS	
Formula	C ₂₈ H ₂₆ CLN ₅ O
MW	484
Storage	
Structure	 <p>The chemical structure shows a benzimidazole ring system connected via a methylene group to a secondary amine. This secondary amine is further connected to a propyl chain, which is linked to another secondary amine. This second secondary amine is bonded to a chlorine atom and a methyl group. Additionally, the propyl chain is connected to a carbonyl group, which is part of a benzamide derivative. The benzamide ring is substituted with a 4-ethynylphenyl group. The ethynyl group is represented as C≡CH.</p>
