Chemical Properties

CAS	
Formula	C10H11CL3N4O2
MW	325.57
Storage	
Structure	 <p>The image shows the chemical structure of Chloroguanabenz acetate. It consists of a central benzene ring substituted with two chlorine atoms (Cl) at the 2 and 6 positions. A guanidine group (-NH-C(=NH)-NH2) is attached to the ring at the 4 position. An acetate group (-O-C(=O)-CH3) is attached to the ring at the 1 position.</p>
