Chemical Properties

CAS	65-29-2
Formula	C30H60I3N3O3
MW	891.53
Storage	
Structure	 <p>The image shows the chemical structure of Gallamine Triethiodide. It consists of a central gallamine molecule (a benzene ring with a methoxy group and two diethylamino groups) and three triethyliodide counterions. The gallamine molecule is shown with its three nitrogen atoms and their respective ethyl groups. The triethyliodide counterions are shown as I⁻ ions with three ethyl groups attached to the iodine atom.</p>
