Chemical Properties

CAS	
Formula	C ₁₈ H ₃₉ O ₇ P
MW	398.48
Storage	
Structure	 <p>The image shows the chemical structure of Tri(2-butoxyethyl) phosphate. It consists of a central phosphorus atom (P) bonded to three oxygen atoms (O) in a trigonal planar arrangement. Each of these oxygen atoms is further bonded to an ethyl group (-CH₂-CH₂-) and another oxygen atom. These three oxygen atoms are then bonded to three butyl groups (-CH₂-CH₂-CH₂-CH₃), forming three 2-butoxyethyl chains. The terminal carbons of the butyl groups are labeled with 'H-C' and 'C-H' respectively.</p>
