Chemical Properties

CAS	
Formula	C6H12CLN3O2
MW	193.63
Storage	
Structure	 <p>The chemical structure shows a linear chain of three ethylene glycol units (CH2-CH2-O) terminated with a chlorine atom on one end and an azide group (-N3) on the other. The azide group is represented as a nitrogen atom bonded to two other nitrogen atoms, with a positive charge on the terminal nitrogen and a negative charge on the other terminal nitrogen.</p>
