Chemical Properties

CAS	
Formula	C ₃₄ H ₃₃ FEN ₄ O ₅
MW	633.5
Storage	
Structure	 <p>The image shows the chemical structure of Hematin, a complex porphyrin ring system with a central iron atom coordinated by four nitrogen atoms. The structure is substituted with various groups, including methyl (CH₃), vinyl (H₂C=CH-), and propionic acid (CH₂CH₂COOH) groups. The central iron atom is coordinated to a nitrogen atom with a hydrogen atom (NH) and a nitrogen atom with a hydrogen atom (NH).</p>
