CAS	
Formula	C ₉ H ₂₀ N ₄ O ₄
MW	248.28
Storage	
Structure	 <p>The image shows the chemical structure of L-NMMA acetate. It consists of a central chain of atoms: a carboxylic acid group (HO-C=O) on the left, a chiral center (C) with a hydrogen atom (H) pointing down and a methyl group (CH₃) pointing up, a methylene group (CH₂), another chiral center (C) with a hydrogen atom (H) pointing down and a methyl group (CH₃) pointing up, a methylene group (CH₂), a nitrogen atom (N) with a hydrogen atom (H) pointing down, a methylene group (CH₂), another nitrogen atom (N) with a hydrogen atom (H) pointing down, a methylene group (CH₂), a third nitrogen atom (N) with a hydrogen atom (H) pointing down, a methylene group (CH₂), a fourth nitrogen atom (N) with a hydrogen atom (H) pointing down, a methylene group (CH₂), a carboxylic acid group (HO-C=O) on the right. The label 'Chiral' is placed above the second chiral center.</p>
