Chemical Properties

CAS	
Formula	C ₁₈ H ₂₃ Cl ₂ N
MW	340.29
Storage	
Structure	 <p>The image shows the chemical structure of Chlorphenoxamine Hydrochloride. It consists of a central carbon atom bonded to a methyl group (H₃C), a phenyl ring, and a chlorine atom. This central carbon is also bonded to an oxygen atom, which is part of an ethyl chain ending in a dimethylamino group (N(CH₃)₂). A separate H⁺ and Cl⁻ ion are shown, representing the hydrochloride salt.</p>
