CAS	
Formula	C32H42CLN5O3
MW	580.17
Storage	
Structure	 <p>The image shows the chemical structure of N-methyl-N'-(azide-PEG3)-Cy3. It consists of a Cy3 dye core (a xanthene derivative) with a methyl group on the nitrogen and a PEG3 chain (three ethylene glycol units) attached to the N' position. The PEG3 chain ends in an azide group (-N3). The structure is shown in a 2D representation with some atoms highlighted in red and blue.</p>
