Chemical Properties

CAS	
Formula	C ₈ H ₁₇ NO ₄
MW	191.23
Storage	
Structure	 <p>The chemical structure shows a tert-butyl group (a central carbon atom bonded to three methyl groups) connected via an oxygen atom to a carbonyl group (C=O). This carbonyl group is further bonded to a nitrogen atom (NH), which is connected to a 1,3-dihydroxypropan-2-yl group. The 1,3-dihydroxypropan-2-yl group consists of a three-carbon chain with hydroxyl groups (-OH) attached to the first and third carbons, and a hydrogen atom attached to the second carbon.</p>
