Structure	 <p>The image shows the chemical structure of nor-NOHA monoacetate. It consists of a central chain: a carboxylic acid group (HO-C=O) attached to a chiral carbon (with a dashed bond to H and a wedged bond to NH2), which is further attached to a CH2 group. This CH2 group is connected to a nitrogen atom (N) that is part of a guanidino-like group (-NH-C(=NH)-NH-). The terminal nitrogen of this group is bonded to a hydrogen atom (H) and an acetate group (-O-C(=O)-CH3). The acetate group is shown with a methyl group (H3C) and a carboxylic acid group (COOH).</p>
Purity	>98%
