Chemical Properties

CAS	82626-01-5
Formula	C ₂₁ H ₂₃ Cl ₂ N ₃ O
MW	404.335
Storage	
Structure	 <p>The chemical structure of Alpidem is a benzimidazole derivative. It features a benzimidazole core with a chlorine atom at the 6-position. At the 2-position, there is a 2-(4-chlorophenyl)ethyl group. At the 3-position, there is a 2-(diethylamino)ethyl group. The structure is shown in a skeletal representation with labels for the methyl groups (H₃C and C H₃) and the chlorine atoms (Cl).</p>
