Chemical Properties

CAS	
Formula	C ₃₆ H ₄₆ N ₄
MW	534.79
Storage	
Structure	 <p>The image shows the chemical structure of Octaethyl-porphyrin, a porphyrin ring substituted with eight ethyl groups. The structure is a large, flat, macrocyclic ring with four nitrogen atoms at the corners. Each nitrogen atom is bonded to two hydrogen atoms. The ring is substituted with eight ethyl groups (CH₂CH₃) at the four meso positions. The ethyl groups are shown as CH₂ and CH₃ groups attached to the ring carbons.</p>
