Chemical Properties

CAS	
Formula	C ₁₀ H ₁₆ N ₂ O ₇
MW	276.24
Storage	
Structure	 <p>The image shows the chemical structure of Glutamyl-glutamic acid. It consists of two glutamic acid residues linked by an amide bond. The first glutamic acid is on the left, with its carboxyl group at the top and its side chain extending downwards. The second glutamic acid is on the right, with its carboxyl group at the top and its side chain extending downwards. The amide bond connects the amino group of the first residue to the carboxyl group of the second residue. A 'Chiral' label is placed above the second residue's alpha carbon.</p>
