Chemical Properties

CAS	
Formula	C ₁₂ H ₂₅ N ₃ O ₄
MW	275.34
Storage	
Structure	 <p>The image shows the chemical structure of Lysinenorleucine, which is a dipeptide consisting of two amino acid residues linked by a peptide bond. The structure is shown in a skeletal representation with stereochemistry indicated by wedges and dashes. The left residue is L-lysine, and the right residue is L-norleucine. The carboxyl group of the lysine is linked to the amino group of the norleucine.</p>
