Chemical Properties

CAS	
Formula	C ₂₁ H ₃₉ NO ₄
MW	369.54
Storage	
Structure	 <p>The image shows the chemical structure of Hydroxyproline palmitamide. It consists of a long palmitoyl chain (16 carbons) attached to the amide group of a proline ring. The proline ring has a hydroxyl group (-OH) at the 2-position and a hydrogen atom at the 3-position. The structure is shown in a skeletal format with atom labels (C, H, O, N) and bond types (single, double).</p>
