Chemical Properties

CAS	
Formula	C ₁₀ H ₂₀ NO ₅ PS ₂
MW	329.37
Storage	
Structure	 <p>The chemical structure of Mecarbam is shown. It features a central phosphorus atom (P) double-bonded to two sulfur atoms (S). One sulfur atom is bonded to a methyl group (H₃C) and a methoxy group (OCH₃). The other sulfur atom is bonded to a methoxy group (OCH₃) and a sulfur atom (S). This sulfur atom is further bonded to a methylene group (CH₂), which is connected to a carbonyl group (C=O). The carbonyl carbon is bonded to a nitrogen atom (N), which is also bonded to a methyl group (CH₃) and another carbonyl group (C=O). This second carbonyl carbon is bonded to a methoxy group (OCH₃).</p>
