## Chemical Properties

CAS	
Formula	C <sub>9</sub> H <sub>7</sub> NO <sub>2</sub>
MW	161.16
Storage	
Structure	 <p>The image shows the chemical structure of N-methylphthalimide. It consists of a benzene ring fused to a five-membered imide ring. The nitrogen atom in the imide ring is substituted with a methyl group (CH<sub>3</sub>). There are two carbonyl groups (C=O) attached to the imide ring, one at the 2-position and one at the 3-position relative to the nitrogen.</p>
