Chemical Properties

CAS	
Formula	C10H12N2O3
MW	208.22
Storage	
Structure	 <p>The chemical structure of Kynurenine is shown. It consists of a central carbon atom bonded to a hydroxyl group (HO), an amino group (NH₂), and a methylene group (-CH₂-). This methylene group is further bonded to another carbon atom which is double-bonded to an oxygen atom (C=O) and single-bonded to a benzene ring. The benzene ring has an amino group (NH₂) at the para position relative to the attachment point.</p>
