Chemical Properties

CAS	
Formula	C ₁₂ H ₂₆
MW	170.34
Storage	
Structure	 <p>The image shows the skeletal structure of 2,2-dimethyldecane. It consists of a ten-carbon decane chain with two methyl groups attached to the second carbon atom. The terminal carbons are labeled with their respective hydrogen and methyl groups: the first carbon is bonded to three hydrogens (H-C), and the tenth carbon is bonded to a methyl group (C-H₃).</p>
